

QuietPatch — Triage Summary (Demo, No Host Data)

Deterministic offline scan using mock database • Suitable for applications

Scope: Scanned 39 apps • 39 vulnerable • 1 critical (3 KEV) • 33 unknowns (demo dataset).

Priorities (top findings from demo):

- Wireshark - CVE-2024-3745 - CVSS 9.8 - Critical - KEV - EPSS 0.97 - Action: update via vendor/brew.
- Microsoft Word - CVE-2024-3529 - CVSS 8.1 - High - EPSS 0.89 - Action: Microsoft AutoUpdate (msupdate).
- Zoom - CVE-2024-3654 - CVSS 7.5 - High - KEV - EPSS 0.83 - Action: in-app updater.
- Safari - CVE-2024-3089 - CVSS 8.2 - High - KEV - EPSS 0.92 - Action: softwareupdate.
- OpenVPN Connect - CVE-2024-3812 - CVSS 8.0 - High - EPSS 0.78 - Action: vendor installer.
- Microsoft Excel - CVE-2024-3530 - CVSS 6.8 - Medium - EPSS 0.72 - Action: Microsoft AutoUpdate.

Workflow: Baseline -> Prioritize (KEV/Critical/High) -> Patch -> Re-scan -> Verify closure -> Attach report to ticket.

Controls: Offline mode; deterministic results; commands are suggestions; verification via before/after report.

Demo only — generated from static dataset; no host identifiers included.
